Ul-CF-EG1 is a normalized cDNA library containing the following tissue(s): Normal lung from adult and from fetal day 64, day 87, week 19 and week 42. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986, 1986

// CGAP FH0 is a CDNA library containing the following tissue(s): Human Grade 1 Chondrosarcoma Cell Line The library was constructed according to Bonaldo, Lennon and Soares, Genome Reactoh, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded CDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tas AGAATCCGGC. The cell line was provided by Dr James Martin from University of Iowa
**Total Trans **Contains Contains Contains Contains Contains Contains Contains Contains Series and the (dT)18 tail. The sequence tag for this library is AGAATCCGGC. The cell line was provided by Dr James Martin from University of Iowa
**Total Trans **Contains Contains Contain

NCI CGAP_DH1 is a normalized cDNA library containing the following tissue(s): VS-8 Cell line from Metastatic Chondrosarcoma in Lung. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-df primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-pac vector. The oligonucleotide used to prime the synthesis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 BQ000991 628 bp mRNA linear EST 26-MAR-2002

i Sequence 6, Application US/09069023A

j Patent No. 6348573

j GENERAL INFORMATION:
    APPLICANT: Nunez, Gabriel
    APPLICANT: Nunez, Machina, Nachina, TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR IDENTIFYING APOPTOSIS
    TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR IDENTIFYING APOPTOSIS
    TITLE OF INVENTION: SIGNALING PATHWAY INHIBITORS AND ACTIVATORS
    TITLE REFERENCE: UM-03333
    CURRENT FILING DATE: 1998-04-27
    CURRENT FILING DATE: 1998-04-27
    NUMBER OF SEQ ID NOS: 38
    SOFTWARE: PATENTIN Ver. 2.0

Patent No. 6369196

GENERAL INFORMATION:

APPLICANT: BETTIN O'S DAIL MOLECULES OF THE CARD-RELATED PROTEIN FAMILY

TITLE OF INVENTION: NOVEL MOLECULES OF THE CARD-RELATED PROTEIN FAMILY

TITLE OF INVENTION: AND USES THEREOF

FILE REFERENCE: 07334/118001

CURRENT APPLICATION NUMBER: US/09/245,281

CURRENT FILING DATE: 1999-02-05

EARLIER FILING DATE: 1998-12-08

EARLIER PELLORATION NUMBER: US 09/207,359

EARLIER PELLORATION NUMBER: US 09/099,041

EARLIER FILING DATE: 1998-06-17

EARLIER FILING DATE: 1998-02-06

NUMBER OF SEQ ID NOS: 44

NUMBER OF SEQ ID NOS: 44

Patent No. 6469140

GENERAL INFORMATION:
APPLICANT: Bertin, John

TITLE OF INVENTION: NOVEL MOLECULES OF THE CARD-RELATED
TITLE OF INVENTION: PROTEIN FAMILY AND USES THEREOF
FILE REFERENCE: 0734-112001
CURRENT APPLICATION NUMBER: US/09/207,359B
CURRENT FILING DATE: 1998-12-08
PRIOR PILING DATE: 1998-06-17
PRIOR APPLICATION NUMBER: US 09/099,041
PRIOR FILING DATE: 1998-06-17
SPRIOR FILING DATE: 1998-06-17
SPRIOR FILING DATE: 1998-06-17
SPRIOR FILING DATE: 1998-06-17
SOFFWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 2

LENGTH: 540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   540

Sequence 1, Application US/09748537

Patent No. 6680167

GENERAL INFORMATION:

APPLICANT: Bertin, John

APPLICANT: Chao, Moses V.

TITLE OF INVENTION: NOVEL MOLECULES OF THE CARD-RELATED PROTEIN FAMILE AND USES THEREC CURRENT APPLICATION NUMBER: US/09/748,537

CURRENT APPLICATION NUMBER: US 09/099,041

PRIOR PRILING DATE: 1998-06-17

PRIOR APPLICATION NUMBER: US 09/099,041

PRIOR APPLICATION NUMBER: US 09/019,942

NUMBER OF EXO ID NOS: 14

SOFTWARE: FastSEQ for Windows Version 4.0

Sequence 2, Application US/09865364

Patent No. 6613510

GENERAL INFORMATION:

APPLICANT: Bertin, John

TITLE OF INVENTION: NOVEL MOLECULES OF THE CARD-RELATED

TITLE OF INVENTION: PROTEIN FAMILY AND USES THEREOF

FILE REFERENCE: 07334-112001

CURRENT APPLICATION NUMBER: US/09/865,364

CURRENT FILING DATE: 1998-1-2-5

PRIOR APPLICATION NUMBER: US 09/099,041

PRIOR FILING DATE: 1998-1-08

PRIOR FILING DATE: 1998-06-17

PRIOR FILING DATE: 1998-06-17

PRIOR FILING DATE: 1998-0-2-06

NUMBER OF SEQ ID NOS: 47

This sequence is a fragment of the human RICK (RIP-like interacting CLARP kinase) protein of the invention. RICK acts as a positive regulator of kinase) protein of the invention. RICK acts as a positive regulator of during CD95 signalling. The invention provides methods for identifying apoptosis signalling pathway inhibitors and activators, and methods and compositions for screening compounds which will modulate the interactions of the various compositions identified: RICK, and the CIDE family of activators (CIDE-A, CIDE-B and DREP-I). RICK, and the CIDE family of activators (CIDE-A, CIDE-B and DREP-I). RICK is useful in screening assays for agents, useful in the diagnosis, prognosis or treatment of disease associated with excess cell growth and dysregulation of apoptosis. Complexes containing RICK and CLARP can be used in drug screening assays to identify inhibitor molecules blocking CD95-mediated apoptosis. Overexpression of ARC in an in vitro cell system can be used to therapy treatment of disease with increased cell death in muscle tissue therapy treatment of disease with increased cell death in muscle tissue and cardiac disorders. Therapputic compositions of CIDEs can be used to treat e-g. cancer, AIDS, neurodegenerative disorders, aplastic anaemia, ischaemic injury, and toxin-induced liver disease. AntiRICK antibodies can be used as reagents for the preparation or affinity chromatography
                                                                                                                                                                                                                                                                                                                                                                RICK; human, RIP-like interacting CLARP kinase; apoptosis regulator; ARC; caspase-8; caspase-10; CD95 signalling; apoptosis signalling pathway; CIDE-A; DREP-1, diagnosis, cell growth; apoptosis dysregulation; gene therapy; cardiac disorder; neurodegenerative disorder; AIDS; aplastic anaemia; ischaemic injury; toxin-induced liver disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Compositions for identifying apoptosis signaling pathway inhibitors

measuring RICK levels. A specific inhibitor
              of an essential step in the blochemistry of apoptosis is needed. RICK interaction with intracellular factors such as CLARP and FADD appears to be essential for apoptosis, inhibitors of RICK binding to intracellular apoptosis factors are potential drug candidates. Note: This sequence was created using information given in the specification
                                                                                                                                                                                                                                                                                                        17

ALT This sequence is a fragment of the human RICK (RIP-like interacting CLARP kinase) protein of the invention. RICK acts as a positive regulator of apoptosis, potentiating apoptosis induced by caspase-8 and caspase-10 during CD95 signalling apoptosis induced by caspase-8 and caspase-10 apoptosis signalling. The invention provides methods for identifying apoptosis signalling pathway inhibitors and activators, and methods and compositions for screening compounds which will modulate the interactions of the various compositions identified: ARC, RICK, and the CIDE family of activators (CIDE-A, CIDE-B and DREP-1). RICK is useful in screening assays for agents, useful in the diagnosis, prognosis or treatment of disease associated with excess cell growth and dysregulation of apoptosis. Complexes containing RICK and CLARP can be used in drug screening assays to identify inhibitor molecules blocking CD95-mediated apoptosis. Overspression of ARC in an in vitro cell system can be used to therapy treatment of disease with increased cell dath in muscle tissue can cardiac disorders. Therapeutic compositions of CIDEs can be used to treat e.g. cancer, AIDS, neurodegenrative disorders, aplastic anaemia, ischaemic injury, and toxin-induced liver disease. AntiRICK antibodies can be used as reagents for the preparation or affinity chromatography media, and for diagnostically measuring RICK levels. A specific inhibitor of an essential step in the biochemistry of apoptosis is needed. RICK interaction with intracellular factors such as CLARP and PADD appears to the essential for apoptosis, inhibitors of RICK binding to intracellular apoptosis factors are potential drug candidates. Note: This sequence was compared using information given in the specification

This sequence is the invention. The RICK protein acts as a positive regulator of the invention. The RICK protein acts as a positive regulator of apoptosis potentiating apoptosis induced by caspase-8 and caspase-10 aurig CDS signalling. The invention provides methods for indentifying apoptosis signalling pathway inhibitors and activators, and methods and compositions for screening compounds which will modulate the interactions of the various compositions identified: RRC, RICK, and the CIDE family of activators (CIDE-A, CIDE-B and DREP-1). RICK is useful in screening assays for agents, useful in the diagnosis, prognosis or treatment of disease associated with excess cell growth and dysregulation of capptosis. Complexes containing RICK and CLARP can be used in drug screening assays to identify inhibitor molecules blocking CD95-mediated of apoptosis. Overexpression of ARC in an in vitro cell system can be used to identify inhibitors of the enzymatic activity of caspase-8.

Condentification of ARC-like inhibitory compounds may be useful for gene thrapy treatment of disease with increased cell death in muscole tissue and cardiac disorders. Therapeutic compositions of CIDEs can be used to treat e.g. cancer, AIDS, neurodegenerative disorders, aplastic anaemia, confined as reagents for the preparation or affinity chromatography media, and for diagnostically measuring RICK levels. A specific inhibitor center and essential for apoptosis, inhibitors of RICK binding to intracellular correct are potential drug candidates
                                                                   Compositions for identifying apoptosis signaling pathway inhibitors useful for treating diseases.
                                                                                                                                          sequence is the human RICK (RIP-like interacting CLARP kinase)
                                                                                                              Claim 1; Fig 7a; 93pp; English

                                                                                                                                                                                            874
                                                                                                                                                                                                                        New Bl protein regulates cell death and cell survival pathways - derivatives, DNA and antibodies, also regulate intracellular inflammation ; for treating AIDS, cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes the isolation of a novel human B1 protein which can interact with, intracellular mediators or modulators of inflammation, cell death and/or cell survival pathways, directly or indirectly. Cells can be modulated or mediated in inflammation, cell death or cell survival pathways or another intracellular signalling activity using B1. Conditions such as AIDS and cancer can be treated using B1. Antibodies, oligonucleotides and ribozymes can also be used to regulate the above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       B1 protein; intracellular mediator; modulator; inflammation; cell death; cell survival pathway; intracellular signalling; AIDS; cancer; human.

ANY68769-95 and AAY68797-99 represent human phosphorylation effectors (PHSP), designated PHSP1-PHSP31 (the protein sequence for PHSP28 is not given in the specification). The sequences were isolated from cDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing disorders associated with increased PHSP expression/activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for Synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   830 Primers useful for synthesizing full length cDNA clones and their use in genetic manipulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AACATACCTGTAAATCATGGTCCACAAGAGGAATCATGTGGATCCTCTCAGCTCCATGAA 454

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      g
               The present invention relates to a new method for identifying compounds for treating and/or preventing cytomegalovirus (CMV) infection and/or related diseases. The method of the invention comprises contacting a test compound with at least one of the cellular kinases RICK, RIP, Nck-Interacting kinase, MKK3 and SRPK-2 and detecting any change in kinase activity. The method of the invention can be used to treat and/or prevent CMV infections and related diseases. Oligonucleotides that can detect the specified kinases can also be used for diagnosis of infection. The present amino acid sequence represents the human cellular kinase RICK protein of the invention, as described above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        513

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to antisense compounds targetted to a nucleic acid encoding human receptor interacting protein (RIP)2 to inhibit its expression. Antisense compounds are used for treating diseases associated with RIP2 expression. They are also useful in antisense gene therapy. The present sequence is human RIP2 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         333
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              354 AsnSerGlySerProGluThrSerArgSerLeuProAlaProGlnAspAsnAspPheLeu 373
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     574
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           454
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      393
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         634

acids comprising sequences encoding peptides diagnosing e.g. cancer. Novel isolated nucleic useful for treating or

11; Page 1595-1597; 2352pp; English. Claim

AAC77607 to AAC78448 encode the human cancer associated proteins given in AAB43398 to AAB44239. The proteins can have activities based on the

```
include: cytostatic; proliferative; vulnerary; immunomodulator; antiabetic; antiathwatic; antiphyoid; antiphematic; antiarthritic; antiabetic; antiathwatic; antiphyoid; antiphyoid; antiphyoid; antiphyoid; ardiant; thrombolytic; coagulant; corrective; ardiant; thrombolytic; coagulant; corrective; antiphyoid; antiphoriatic and antiangiogenic. The motropic; vasotropic; antiphoriatic and antiangiogenic. The polymucleotides and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. CC Polymucleotides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of correction, modulate haemostatic or thrombolytic activity, modulate (disorders, allergic reactions; graft versus host disease and organ colection, modulate haemostatic or thrombolytic activity, modulate (disorders) and infections. The peptides, nucleotides, antibodies, agonists and antagonists may be also be used in drug screens. AAC78449 to the present sequences used in the exemplification of the control of the contr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  357
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              417

The KPP polypeptides, polynucleotides, agonists and antegonists are useful for diagnosing, treating or preventing cell proliferative disorders such as atherosclerosis, cirrhosis, hepatitis and cancer, developmental disorders e.g. mental retardation, neurological disorders including Alzheimer's disease and Parkinson's disease, autoimmune and inflammatory disorders such as Crohn's disease and diabetes mellitus and finally, viral, bacterial, fungal, parasitic, protozoan or helminthic infections. Furthermore, the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence is a tragment or the number NLCK (NTP-INFE INCEPTION CLARKY Kinase) protein of the invention. RICK acts as a positive regulator of apoptosis, potentiating apoptosis induced by caspase-8 and caspase-10 during CD95 signalling. The invention provides methods for identifying apoptosis signalling pathway inhibitors and activators, and methods and compositions for screening compounds which will modulate the interactions of the various compositions identified: ARC, RICK, and the CIDE family of activators (CIDE-A, CIDE-B and DREP-1). RICK is useful in screening caspas for agents, useful in the diagnosis, prognosis or treatment of disease associated with excess cell growth and dysrequlation of apoptosis. Complexes containing RICK and CLARP can be used in drug screening assays to identify inhibitor molecules blocking CD95-mediated apoptosis. Ownerexpression of ARC in an in vitro cell system can be used to therapy treatment of disease with increased cell death in muscle tissue and candiac disorders. Therapeutic ocmpositions of CIDEs can be used to treat e.g. cancer, AIDS, neurodegenerative disorders, aplastic anemia, ischaemic injury, and toxin-induced liver disease. AntiRICK antibodies can be used as reagents for the preparation or affinity chromatography media, and for diagnostically measuring RICK levels. A specific inhibitor of an essential step in the biochemistry of apoptosis is needed. RICK interaction with intreacellular factors such as CLARP and FADD appears to be essential for apoptosis, inhibitors of RICK levels. This sequence was a reagent of propersion in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence is a fragment of the human RICK (RIP-like interacting CLARP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          634
